Professional Summary

- Full Stack Developer with 3+ years of hands-on experience building production-grade web applications using React.js, Next.js, Django , Django , REST Freamwork, FastAPI ,and Python Flask. Specializes in microservices architecture, RESTful API design, and crafting responsive, user-centric interfaces. Skilled in building AI-driven applications using Large Language Models, LangChain, and LangGraph, including RAG pipelines and conversational agents for real-world use cases like voice bots and recommendation systems. Brings a strong grasp of Data Structures, Algorithms, and OOP principles, complemented by practical experience in system design, database tuning, and performance optimization. Comfortable across the DevOps stack — from writing Dockerfiles and Kubernetes manifests to configuring Jenkins CI/CD pipelines and deploying on Azure. Thrives in Agile teams where code quality, collaboration, and continuous delivery are prioritized.

Experience

- **Gavkari Agro Producer Company Limited** Pune, Maharashtra
  Full Stack Developer *Aug 2023 - Present*
  - **Full Stack Development**: Engineered scalable full stack applications using React and python, Django, Flask, improving overall system performance by 25% through application and architecture optimizations
  - **Frontend Development**: Developed modular and reusable React components and form abstractions, improving UI responsiveness, maintainability, and development efficiency across application modules
  - **Backend & APIs**: Designed and implemented secure RESTful APIs and microservices using Python-based frameworks, reducing API response times by 30% through optimized service and data-access logic
  - **System Features**: Built admin dashboards and backend services for user management, role configuration, reporting, and system workflows, enabling operations teams to manage key business processes efficiently
  - **Database Optimization**: Optimized MySQL and PostgreSQL queries through indexing strategies, query rewrites, and schema improvements, resulting in up to 40% faster data retrieval across critical modules
  - **Security**: Implemented JWT-based authentication and role-based access control (RBAC), securing application endpoints and enforcing fine-grained authorization across user roles
  - **DevOps**: Automated build, testing, and deployment workflows using Docker and Jenkins CI/CD, improving release efficiency and reducing manual deployment effort
  - **Collaboration**: Collaborated in Agile development teams using Git and GitHub for version control, pull requests, code reviews, branch management, and continuous delivery

Projects

- **AI Career Counselling Platform** *Nov 2024 – Present*
  - **Overview**: Built an AI-driven career counselling platform that recommends suitable colleges and courses to students by analyzing their exam marks, category, and preferences against historical cutoff data
  - **Recommendation Engine**: Implemented a rule-based filtering layer over previous years' cutoff datasets to shortlist eligible colleges by percentile, category, branch, and location, then ranked results by admission probability
  - **RAG Pipeline**: Designed a retrieval-augmented generation pipeline using LangChain that embeds college prospectuses, cutoff sheets, and admission policies into a vector store, enabling grounded and accurate answers to student queries
  - **LLM Integration**: Integrated Large Language Models with structured prompts and tool calling to convert raw eligibility results into personalized, human-readable counselling guidance and comparison summaries
  - **Conversational Flow**: Orchestrated multi-turn counselling conversations with LangGraph, maintaining student context across turns and routing queries between eligibility lookup, document retrieval, and advisory responses
  - **Backend**: Developed REST APIs with Python Flask to handle student profiles, cutoff queries, and LLM inference requests, with input validation and structured JSON responses for reliable frontend consumption
  - **UI**: Built a responsive React.js interface with guided input forms, filterable college result tables, and an interactive chat panel for real-time career counselling
- **Tech Stack**: Python, Flask, LangChain, LangGraph, Large Language Models, RAG, Vector Database, React.js, JavaScript, PostgreSQL, REST APIs, Git

- **Cab Service Provider System** *Aug 2023 – Nov 2024*
  - **Overview**: Developed a cab booking platform from scratch, handling everything from ride requests and fare computation to real-time tracking and driver-rider coordination
  - **Frontend**: Assembled a responsive React UI with dynamic booking forms, live ride tracking views, and driver/admin dashboards — all optimized for usability across screen sizes
  - **Backend**: Designed REST APIs covering ride lifecycle management, dynamic fare calculation, and real-time event handling, with clear separation of concerns across service layers
  - **Security**: Implemented authentication and authorization flows to control access by role (rider, driver, admin), along with booking state machine logic to prevent invalid transitions
  - **Integration**: Connected React frontend to Django Backend service with consistent request/response contracts, client-side validation, and error handling to ensure smooth end-to-end data flow
  - **Database**: Tuned MySQL queries and refined schema design to handle concurrent bookings efficiently and keep read/write operations fast under load
- **Tech Stack**: React, JavaScript, Python, Django, MySQL, REST APIs,Docker, Git

Skills

- **Languages:** Python, JavaScript, SQL
- **AI & LLM:** Large Language Models, LangChain, LangGraph, Prompt Engineering, RAG, Vector Databases, AI Agents, Voice Bots
- **Frontend:** React.js, Next.js, JavaScript, HTML5, CSS3, Tailwind CSS, Bootstrap
- **Backend:** Python Flask,Django,Django REST Framwork, FastAPI, REST APIs, Microservices Architecture
- **Database:** MySQL, PostgreSQL, MongoDB, Mongoose, JDBC, SQLAlchemy, Flask-Migrate,
- **DevOps & Cloud:** Docker, Kubernetes, Azure Cloud, Azure DevOps, Jenkins, CI/CD Pipelines
- **Tools:** Git/GitHub, Postman, JWT, OAuth, Linux
- **Concepts:** Data Structures, Algorithms, OOP, Multithreading, System Design, Performance Optimization
- **Methodologies:** Agile, Scrum

Education

- **Government College of Engineering, Chandrapur** Chandrapur, Maharashtra
  B.Tech Computer Science & Engineering (CGPA: 8.20) *2022 – 2026*
- **P.N College,Pusad** Pusad, Maharashtra
  HSC (75.50%) *2021 – 2022*
- **J.S.P.M , Pusad** Pusad, Maharashtra
  SSC (80.00%) *2019 – 2020*
